

Build Modern Classic — Astro Website

A Claude Code build prompt for the Modern Classic Barbershop & MDRN Classic Grooming homepage and supporting site.

Project context

You are building the homepage and supporting infrastructure for **Modern Classic Barbershop & Shave Parlor** — a Zanesville, Ohio barbershop that also runs a premium grooming product line called **MDRN Classic Grooming Essentials LLC**. They are the **same business**. The current setup is split across two third-party platforms:

- **Square** (`modern-classic.square.site`) handles barbershop bookings.
- **Shopify** (`mdrnclassic.com`) handles product e-commerce.

The new Astro site at `mdrnclassic.com` will be the unified front door. Bookings will continue to live on Square (deep-link out). Product checkout will continue to live on Shopify (deep-link out). The Astro site renders the marketing pages, brand story, service info, and product showcase natively for SEO and brand cohesion. It will also pull recent photos from Facebook at build time as visual proof of active shop work — but that's a phase 2 item, not part of this build.

The brand thesis in seven words: **Get the cut. Keep the style.** The barbershop is where the style is created; the products are how the customer keeps it going at home. Every section of the homepage should reinforce this connection.

Tech stack and constraints

- **Framework:** Astro (latest stable). Use `.astro` components, not React, unless interactivity is genuinely needed (the homepage doesn't need React).
- **Styling:** Plain CSS with CSS custom properties (variables). No Tailwind unless you genuinely think it's the right call.
- **Hosting target:** Likely Netlify or Vercel — set up the project so it builds cleanly on either. Use static output (`output: 'static'`).

- **Node:** 20+
- **Image handling:** Use Astro's built-in `<Image />` component from `astro:assets` for local images. Remote Shopify CDN images can be hotlinked initially using regular `<img>` tags with `loading="lazy"` — moving to local copies is a phase 2 item.
- **Accessibility:** Proper semantic HTML, alt text on all images, focus states on all interactive elements, color contrast meeting WCAG AA.
- **Performance:** Lighthouse target of 95+ on Performance, Accessibility, Best Practices, SEO.
- **Animation:** Respect `prefers-reduced-motion: reduce`.

Keep dependencies minimal.

Design freedom

You have wide creative latitude on the visual design. Make this look like a premium barbershop and grooming brand — confident, masculine, refined. Think a \$200 cologne brand crossed with a real Zanesville barbershop.

A few non-negotiables, then you choose the rest:

- **The logo provided uses a gold/bronze emblem on transparent/dark background.**
The site palette should harmonize with that gold. Don't fight the logo with a clashing accent color.
- **The brand voice is "barber-built, modern gentleman, premium but approachable"** — not corporate, not ironic, not maximalist. Refined.
- **Typography should be distinctive.** Avoid the AI-default stack (Inter alone, Space Grotesk, system fonts). Pair a characterful display face with a clean body face. Examples that would fit: a refined serif like Cormorant Garamond, Playfair Display, or DM Serif Display paired with something like Inter, Manrope, or Söhne. But pick what feels right — surprise me.
- **The headline phrase "Get the Cut. Keep the Style." is the brand thesis.** Use it as the hero H1, with the second half visually distinguished (italic, color-accented, weight shift — your call).
- **Real shop photography is not yet provided.** Use atmospheric placeholders or generative-feeling visual elements (gradients, geometric frames, decorative borders, monogram emblems) where photography would normally go. Leave clear TODOs for

swap-out.

Beyond that — section spacing, animation choices, decorative elements, layout asymmetry, hover behaviors, the visual treatment of section dividers — all yours. Make it feel intentional and crafted.

Logo

A single logo file will be placed in the project root or `src/assets/` before you run:

- `logo-light.png` — gold emblem version of the Modern Classic Barbershop & Shave Parlor logo. Round badge with “MODERN CLASSIC” wordmark, “BARBERSHOP” curved across the top, “& SHAVE PARLOR” curved across the bottom. Transparent background.

Use this logo prominently in the hero section, centered above the headline. Don’t put it in the header — the header should use a wordmark treatment (“Modern · Classic” or similar) instead. The hero is where the full emblem gets to breathe.

Page sections (homepage)

Build the homepage with this section order. The order matters — locals coming to book see the booking path early; product visitors get caught by the product showcase before they bounce.

1. **Sticky header** — wordmark + nav (Services, Shop, About, Visit) + Book Now button. Mobile collapses nav, keeps wordmark and Book Now.
 2. **Hero** — full logo emblem centered, eyebrow line, H1 (*Get the Cut. Keep the Style.*), lede paragraph, two CTAs (primary Book + ghost Shop), meta strip (Haircuts · Beard Work · Hot Towel Shaves · Premium Products).
 3. **Quick Actions Bar** — 4 paths: Book a Haircut, Cut + Beard, Shop Products, New Customer. 4-column grid on desktop, 2x2 on mobile.
 4. **Services** — 6 service cards in a grid, each with name, price, duration, description, and a per-card “Book →” link. “View all services” CTA below.
 5. **Story** — “A Brand Built by Barbers” — two-column with text and a vertical visual. Includes the pull quote: *“A great haircut should do more than look good for one day.”*
 6. **Products** — 4 featured product cards with real Shopify product images. Each card links to the corresponding Shopify product page. “Shop all products” CTA below.
 7. **Reviews** — 3 real customer reviews (provided below in the data section).
 8. **Location** — address, hours, contact, Get Directions + Book Now CTAs. Stylized map placeholder for now.
 9. **Final CTA** — “Ready for a Fresh Cut?” with primary Book + ghost Shop buttons.
 10. **Footer** — wordmark + brand description, three link columns (The Shop, Shop Products, Help), social links, copyright.
 11. **Mobile sticky Book CTA** — full-width gold button fixed at bottom on mobile only.

Real customer reviews (use these on the homepage)

Review 1 — Salt Spray, ★★★★★

Is the only thing I put in my hair other than the powder, and my wife loves it too. The best smelling hair product on the market for sure. — *S.V.*

Review 2 — Soft Clay, ★★★★★

A staple in my routine for months. Strong hold from morning to night, easy to work with, finishes natural. Highly recommend. — *Andrew H.*

Review 3 — Texture Powder & Matte Paste, ★★★★★

Softer and more durable than your normal clay paste. The powder holds your hair all day and the paste is easy to apply. You don't want to miss out. — *Mario V.*

About / Story (use on the homepage Story section, full version on a future About page):

As seasoned barbers, we understand the confidence you gain after a fresh haircut. We aim to equip modern gentlemen with grooming essentials that ensure they feel and look their best every single day.

Modern Classic started in the chair. After more than ten years of cutting hair and watching clients struggle to recreate the style at home, our founder set out to build the products he wished his customers had — premium grooming essentials with no residue, no buildup, and a scent worth wearing.

Today, MDRN Classic products are made by barbers, used in our shop, and shipped to clients across the country. The cut happens in Zanesville. The style stays with you wherever you go.

Why “MDRN Classic” exists (use on About page or product pages):

Displeased with the stubborn residue and buildup from traditional products, MDRN Classic brand creator — a barber of over 10 years — set out on a mission to develop high quality grooming essentials. The goal: deliver high-performance, pleasantly scented products that leave you feeling exceptional. Endorsed by barbers and validated by countless satisfied

clients.

Product collection blurbs (one-liners for collection cards):

- **Styling** — Pomades, pastes, and clays for any look you want to hold.
 - **Texture & Finish** — Sprays and powders for volume, grit, and effortless body.
 - **Shaving** — Traditional shaving cream and post-shave balm for a clean, smooth finish.
 - **Fragrance** — The Savoir cologne collection — scents worth being remembered for.

SEO and metadata

In `BaseLayout.astro`, set up metadata. Homepage:

- **Title:** Modern Classic Barbershop & Shave Parlor — Zanesville, OH
- **Description:** Modern Classic is a Zanesville barbershop and grooming brand. Premium haircuts, beard work, and straight razor shaves — plus MDRN Classic grooming products built by barbers.
- Open Graph tags (og:title, og:description, og:image, og:url, og:type=website)
- Twitter card (summary_large_image)
- `<meta name="theme-color" content="#0d0d0d">` (or whatever dark base color you choose)
- JSON-LD structured data for `LocalBusiness` schema with address, hours (placeholder), services, social profiles

Natural keywords to weave in (do not stuff): Zanesville barbershop, men's haircut Zanesville, beard trim Zanesville, straight razor shave Zanesville, kids haircut Zanesville, men's grooming products, beard oil, texture powder, salt spray, barber-built grooming products, Modern Classic Barbershop, MDRN Classic.

What NOT to do

- Don't add a contact form on the homepage. Contact lives on a dedicated page later.
 - Don't embed Square or Shopify widgets. Always deep-link out.
 - Don't add a newsletter signup yet — owner hasn't picked a provider.
 - Don't add the Facebook photo grid yet. Leave a placeholder comment in the page where it will eventually go (between Reviews and Location).
 - Don't fabricate copy. Everything you need is in this prompt. If something's missing, leave a `TODO:` comment naming what's needed.
 - Don't add Lucide, Heroicons, or any SVG icon library. Use Unicode glyphs or hand-drawn inline SVG if you need icons.
 - Don't use AI-default fonts (Inter alone, Space Grotesk, Roboto, system fonts as the only stack). Pick something distinctive.
-

Verification

When you finish, verify the output through code inspection — don't ask the owner to take screenshots. Use `curl`, read the rendered HTML from `dist/`, and inspect the build output to confirm:

- All product images load from the Shopify CDN URLs (HTTP 200)
- All Book buttons resolve to the Square URL
- All product cards link to valid Shopify product URLs
- Internal anchor links match section IDs in the rendered HTML
- The logo file is present in the build output
- Meta tags render correctly in `<head>`
- Mobile sticky CTA appears only at narrow viewports (check the CSS media query in the built CSS)
- `prefers-reduced-motion` is respected (check the CSS)

If something looks off, describe what you see in the rendered HTML and explain what you'd change.

Phase 2 (don't do now, but note in README)

Things that aren't part of this build but should be tracked:

- Facebook Graph API integration to pull recent shop photos at build time. Owner has been working through this — uses a System User token, fetches `type=uploaded`, stores `FB_PAGE_ID` and `FB_ACCESS_TOKEN` in env, handles pagination. Triggered by Netlify build hook / Vercel Cron / GitHub Actions on a schedule.
- Migrate Shopify policy pages (FAQs, Shipping, Returns, Wholesale, Privacy, Terms) to native Astro pages.
- Replace placeholder Story image with real shop interior photo.
- Replace stylized location-map placeholder with real Google Maps embed.
- Add full weekly hours and a phone number.
- Deep-link individual services from Square instead of one shared booking URL.
- Newsletter signup integration once a provider is chosen.
- Download Shopify product images locally for Astro Image optimization.
- Add a real About page, Contact page (with form), and Services index page.
- Add a Blog / Styling Tips page (the existing Shopify blog has two starter posts).

Final note

Build this like a craftsperson, not a code-generator. The owner is a barber of 10+ years who built a product line because nothing on the market met his standard. The site should feel the same way — premium, intentional, every detail considered. If you find yourself adding something generic or filler, stop and ask whether it earns its place on the page.

Take your time on the typography, spacing, and color choices. Those are what make the difference between “another dark mode site” and “a site that looks like the brand it represents.”

Have fun with the design. Surprise me.
